Welcome to AceCad Software

AceCad Software is a proven and leading IT software developer of supply chain solutions for Steel Building Structures and Building Information Modeling (BIM) Collaboration in the Architectural, Engineering and Construction (AEC), and Industrial Plant sectors.

With **Fabrication Information Modeling (FIM)**, a practical and immediately available extension of BIM methodology, at the heart of AceCad's work-based and integrated solution platform, users are enabled to efficiently manage their supply chain through fabrication and collaboration between contracting companies.

AceCad's extensive domain knowledge of the international steel fabrication and construction processes have enabled development of unique solutions; rendering construction projects more open, transparent and accessible through the supply chain to reduce design, fabrication and construction schedules and costs.

How can AceCad Software assist you...?

Solutions for:

AEC - Architecture, Engineering & Construction
Pre-Engineered Building Manufacturers

BIM

BIM - Building Information Modeling for Steel Delivery
